Selecting the Type and Method of IP Address Configuration

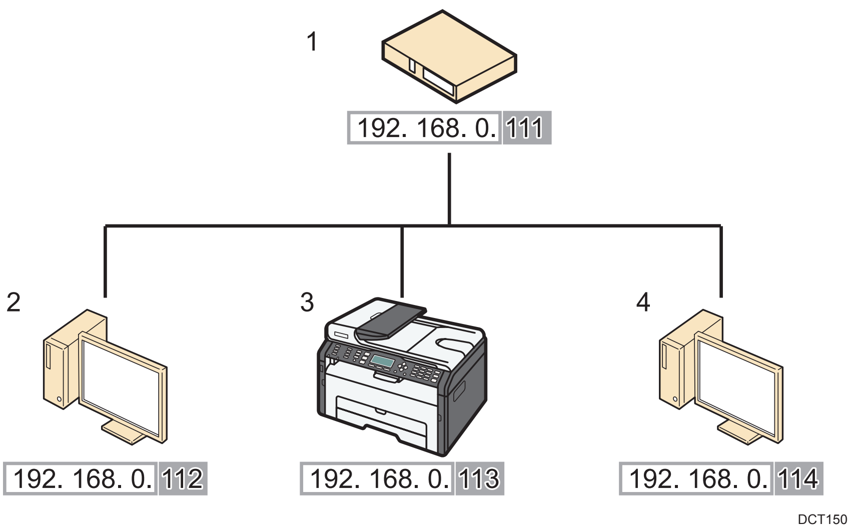

◆ What is an IP address?

The IP address is an identification number allocated to computers and other devices connected to an IP network. An IP address is an address for use on a network. There are two types of IP address: IPv4 and IPv6.

- IPv4 address

  The IPv4 address consists of four fields, such as "192.168.0.113".
  The first three fields (192.168.0) are fixed, and the last one (113) is variable.

1. Router
2. Another computer
3. Machine
4. Your computer

- IPv6 address

  Because IPv4 addresses are running out as a result of the widespread use of the Internet, IPv6 has been developed as a next generation Internet protocol.

◆ Specifying the IP Address

You can specify the IP address as follows:

- Obtaining the IP address from the DHCP server
- Specifying a static IP address manually

◆ What is a DHCP?

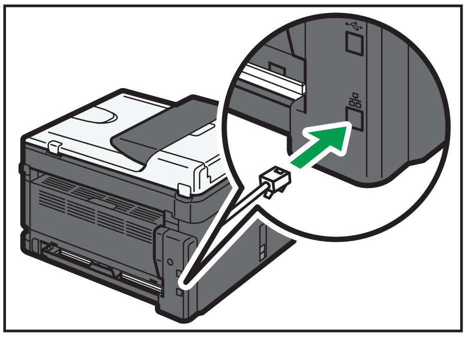

DHCP is a networking protocol that automatically assigns an IP address and other information to the connected device. You can automatically obtain the IP address by enabling the machine's DHCP setting.

Connecting the Computer and Machine

Important

- If you are using the machine in a wireless LAN environment, make sure the network cable is disconnected. Proceed to Step 3.

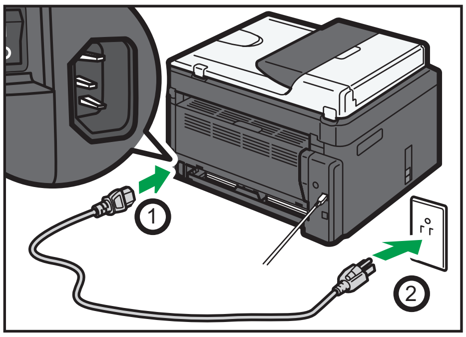

1 **Connect the network cable to the Ethernet port.**

CTT138

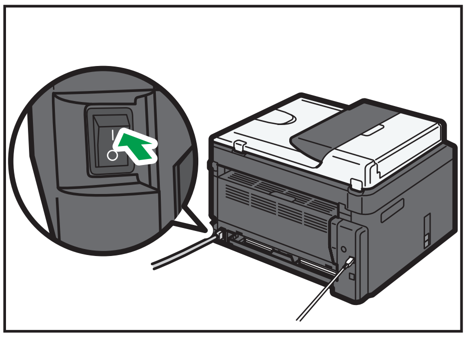

2 **Plug the other end of the cable into a network device, such as a hub.**

3 **Connect the power cord.**

DCT072

4 **Turn on the power.**

1 Turn off the power.

2 While holding the [Stop/Start] key down, switch the power on and do not release the [Stop/Start] key until 13 seconds elapse.

CTT175

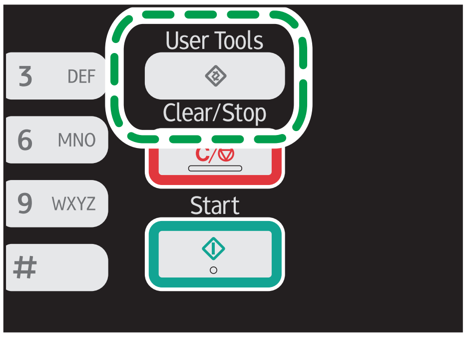

3 Check the IP address on the configuration page.

The address appears under Host Interface.

If the IPv4 address is not automatically assigned by the DHCP server, the machine automatically selects an unused IPv4 address starting with "169.254.xxx.xxx" (Auto IP function).

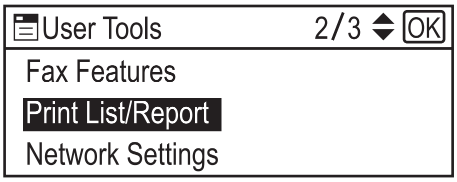

SP 212SUw/SP 212SNw/SP 212SFw/SP 212SFNw/ SP 213SUw/SP 213SNw/SP 213SFw/SP 213SFNw

The address appears under Network Settings.

If the IPv4 address is not automatically assigned by the DHCP server, the machine automatically selects an unused IPv4 address starting with "169.254.xxx.xxx" (Auto IP function).

Changing the IP Address Settings

To configure the IP address manually, it is necessary to specify the IP address-related settings. For details, see page 19 "3.Appendix".

◆ **SP 212w/SP 212Nw/SP 213w/SP 213Nw**

Use Smart Organizing Monitor to connect the machine to the network. Install Smart Organizing Monitor first on a computer on the same network.

For details, see "Installing the Driver and Software", User Guide.

◆ **SP 212SUw/SP 212SNw/SP 212SFw/SP 212SFNw/ SP 213SUw/SP 213SNw/SP 213SFw/SP 213SFNw**
